

TUL

A new generation of tool storage.

TUL – a helpful, safe and protective means of tool storage and transportation.

The TUL system is designed to provide for the safe storage, transportation, and accessibility of high-quality precision tools. The system includes mobile carts and storage cabinets for the accommodation of the renowned TUL tool carriers.

In designing the system, particular attention was given to providing for safe handling, good mobility, flexibility in everyday use, and ample load bearing capacity. The result is a system for the protective transportation and ready accessibility of your tooling.

Shop floor flexibility – efficiently store tools where they are needed.

TUL Storage Blocks are available for all standard and HSK tool holder sizes, as well as units for custom holder storage requirements.

TUL Aluminum Profile Rails allow TUL Storage Blocks to be mounted inside cabinets, on machines, or in tool cribs.

TUL Mobil Carts are available in a number of configurations. The carts allow tool holders to be easily transported to a machine while protecting them from damage.
