

With radial alignment. Used for fitting into short spindles (DIN 69002) for holding HSK tools.

Design

The adjusting screw on the machine spindle can be precisely set in radial run-out by using threaded pins (for alignment).

Supply includes

Clamping cartridge, stop/cover ring, and cylindrical holding screw (for holding KS adapter flange).

Note

On request the adapter flanges can be supplied with a KS clamping cartridge for use with minimal lubrication (MQL).
