BKZ...K

BKZ...D

The drawbar style hydraulic die clamping systems are designed for clamping tools and dies of different widths on press slides. The BKZ-PS variant is equipped with a non-return valve. The BKZ-D (D = Double-acting) variant is intended for use in confined installation spaces where short clamping and/or release times are required. The BKZ-K (K = Cup) variant compensates for nonparallel tool clamping surfaces. The die clamps can be manually moved in the T-slot of the press slide between the parking position and the respective tool. Hydraulic pressure is at a maximum 400 bar.
